

twister[®]

power steering for your pool cleaner

TWISTER ensures your pool cleaner will completely cover your pool floor and not get stuck in corners.

AQUAQUIP[®]

twister®

- Simple to install, fits to your existing pool hose
- Suits all suction cleaners with swivel hose connection
- Steers pool cleaner out of corners
- Allows random, thorough pool cleaning
- “Twin-Track” continuous drive technology

Problem: Many suction pool cleaners simply get stuck in corners, others constantly “follow the hose” around the pool, leading to a repetitive figure-8 pattern. Either way, you end up with a dirty pool.

Solution: Simply install Twister. Twister continually changes the direction of the hose – effectively steering your pool cleaner out of awkward corners to ensure a constantly random and thorough cleaning pattern.

How does Twister work?

Twister is powered by the constant flow of water through the pool cleaner hose and will counter-rotate the hose 3-4 times per hour. A unique Angled Adaptor (included with Twister) is fitted between the pool cleaner and the hose. The counter-rotation of the hose causes the adaptor to continually change direction, freeing your pool cleaner from corners.

Invented and refined by the frustrated owner of a suction pool cleaner.

Engineered by the Australian company you know and trust – Aqua-Quip.
